---

## Artist Profile: Keith Burtonwood

Using an Ipad (or other tablet for that matter) for the purpose of drawing or painting is not new but is beginning to establish itself as a legitimate medium for artists of all abilities .In fact many art colleges incorporate the Ipad in their teaching programmes. The increase in the Ipad's popularity owes much to artist's such as David Hockney who has been experimenting with the medium for quite some time and is now holding exhibitions of his work all over the globe.
For me (a professional landscape photographer for some years and a keen wildlife photographer) the Ipad started out as a bit of fun but I soon realised it's potential as a way of using many of my photographic images captured over many years. In the early days the software available for use with Ipad was limited. However, much more sophisticated applications are now available. Procreate is considered to be one of the best apps but I prefer to use Sketches. Both apps are available on the app store.
